Apart

# KISSPEPTIN

10mg pen, reconstituted with 3mL of bacteriostatic water

## WHAT IT DOES

- Supports hormone signalling and reproductive hormone regulation
- May support libido, hormone balance and fertility focus
- May help stimulate the body's natural reproductive hormone pathways

## HOW IT IS USED

Taken 2–3 times weekly

Subcutaneous injection

Morning or pre-evening use depending on protocol

Used for libido support or fertility-focused protocols

4–8 weeks on, then 4 weeks off

## DOSAGE PROTOCOL

Concentration: 10mg / 3mL = 3.33mg/mL

| UNITS / CLICKS     | VOLUME | DOSE |
|--------------------|--------|------|
| 30 units / clicks  | 0.30mL | 1mg  |
| 60 units / clicks  | 0.60mL | 2mg  |
| 90 units / clicks  | 0.90mL | 3mg  |
| 120 units / clicks | 1.20mL | 4mg  |

All dose conversions assume the peptide has been reconstituted exactly to 10mg in 3mL.

### Libido Support:

1mg 2–3 times weekly (30 units/clicks)

### Hormone Support:

2mg 2–3 times weekly (60 units/clicks)

### Advanced Protocol:

3mg 2–3 times weekly (90 units/clicks)

### Higher Dose Example:

4mg 2–3 times weekly (120 units/clicks), if tolerated

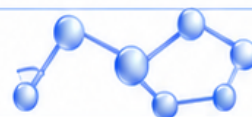

### Duration / Cycle:

4–8 weeks, then 4 weeks off

## POSSIBLE SIDE EFFECTS

- Mild irritation or redness at injection site
- Occasional headache, nausea or temporary flushing
